

TODO Application

- System Users: Administrator, Employees
- Logins: Administrator, Employees
- Seed Administrator users using database seeders
- Administrators can Invite employees via email
- By clicking the invitation link sent via email users can join system & set their password
- Administrators can create todos that may have following statuses
 - Open / In Progress / Completed
- An administrator can edit/delete todos
- Administrators can assign todos to their employees
- Whenever new todo is assigned to employees they should get a notification
- Employees can change their todo status to (In Progress / Completed)
- Logout

Good to have (optional)

- Prepare proper readme file for project setup
- Add toaster notification for all alert messages (success messages, warning messages....)
- Use of tailwind CSS over bootstrap
- Use of alpine js
- Ask for confirmation where needed (with popup)
- After completing the test push the code on GitHub public repository and share the repo with a responsible person
